

Save Vultures Save Environment

- Vultures are natural scavengers, which consume the carcasses and clean the environment. Today, they are on the verge of extinction. Extinction of Vultures will lead to open putrefaction of carcasses and unhygienic/polluted Environment.
- The use of the drug 'Diclofenac' in the veterinary sector is the main cause of the death of vultures. Government of India has banned the use of 'Diclofenac' in veterinary sector.
- Join the Campaign to Save Vultures and ensure 'Diclofenac' is not administered to animals and ensure that the nesting sites of Vultures and their habitats are protected.
